Why pregnant mothers need an app?

Background

- Track health easily: Monitor pregnancy progress, appointments, test result and medication.
- Stay informed: Access reliable, locally relevant advice on nutrition, mental health and well being.
- Reminders and alerts: Never miss MOH clinic visits, scans or vaccination schedules.
- Empower mothers: Actively involve them in their own care, improving awareness of risks and what to ask doctors

There are many pregnancy apps available both globally and locally

Strengths

- Provide basic features like appointment reminders, kick counters, weight tracking and journals

Gaps/ Limitations

- Limited cultural relevance
- Focused on healthcare workers, not mothers directly
- Limited integrations with clinics and national health system
- Accessibility issues: early- stage pilots

App Name	Key Features	Gaps / Limitations	Opportunity for අම්මා
WeCare Mother and Child App	Kick counter, weight tracking, belly photo diary, journal, lab report upload, appointment reminders, symptom info	• Only in English• Health advice not customized for Sri Lankan foods or medical practices• No doctor/midwife connectivity• No peer community• No mental health support• Privacy concerns with data storage	• Add Sinhala/Tamil bilingual support• Integrate with MOH clinics• Include culturally relevant health & nutrition advice• Add mental health tools and community features
D2D Care (FPA Sri Lanka)	Data entry for home visits, pregnancy tests, family planning, MCH records (for health assistants)	• Designed for healthcare workers, not mothers• No user-facing features• No tracking or feedback for mothers• Lacks education or guidance content	• Build a mother-centered version where users can view MOH records, get reminders, and see progress• Two-way communication between mothers and healthcare workers

Maternal & Newborn Guides (FHB + SLCOG)	National clinical guidelines for doctors and nurses	• Technical and not user-friendly• No tracking or personalization• No reminders or interactive tools	• Translate national guidelines into simple, mother-friendly content• Local language education + trackers aligned with FHB/SLCOG
My Baby (BloomingMoms.lk)	Kick counter, contraction timer, journal, podcasts, videos, postpartum tools	• Android-only• No community or clinic integration• Limited language support• Irregular updates	• Expand to iOS and multilingual versions• Add community forums• Enable clinic integration for reminders and records
Mathru	SMS alerts, visit reminders, nutrition advice, supplement tracker (developed with FHB)	• Early-stage; limited rollout• Only works for registered MOH mothers• Minimal educational content• Likely text-based, not app-based	• Build a complete mobile app + optional SMS support for rural users• Add visual design, education, and interactive features

අම්මා

- අම්මා is a mobile app designed to support pregnant mothers in Sri Lanka
- It provide personalized, culturally relevant guidance throughout pregnancy
- Fully integrated with MOH clinics and national guidelines
- Include tracking, reminders, digital antenatal records and community support
